

Optically Clear Glazing Film

Product Description

Unprinted areas appear 100% clear while printed areas appear frosted. It provides an intermediate level of privacy and is perfect for simulating the seclusion created by cut frosted vinyl with the added bonus of colour.

When selecting designs for optically clear glass film, it is important to note that greater the area of clear film, the more likely that dust particles will be visible once installation is complete. bleux therefore recommends you choose designs' that have minimal negative space for best results with this product.

Installation

This product must be installed by experienced signage professionals'. Please be aware that a dust free environment is required for the best results. bleux can arrange for installation and site measures in all capital cities if required.

For the best finish, it is recommended that all glass surfaces are thoroughly cleaned prior to installation. Any grime or dust left on the glass surface will become trapped underneath the film and remain visible. For this reason, bleux requires the site to be a dust free environment prior to and during installation. If the site is not dust free, bleux cannot guarantee the installed film will be free from any imperfections.

Lead Time

Three weeks from receipt of 50% deposit and purchase order. Please allow longer for customised colours and designs.
